ACH Services

ACH Debit Block and Debit Filter — preventing unauthorized electronic debits through originator allow-lists, SEC-code restrictions, and amount caps. Integrates with Positive Pay for unified exception review.

SERVICES	ACH Debit Block · ACH Debit Filter · Unauthorized return handling
CONTROL MODES	Block-all default · allow-list · amount cap · frequency
SEC CODE FILTERING	CCD · PPD · WEB · TEL · CTX · IAT
EXCEPTION DEADLINE	11:00 a.m. ET daily
PRICING	\$20 / account / month + \$0.05 / item
UNAUTHORIZED RETURN WINDOW	24 hours (UCC Article 4A) commercial
INTEGRATION	Unified dashboard with Positive Pay
AUDIT TRAIL	Full logging of additions, removals, decisions

AT A GLANCE

Overview

ACH Services protects commercial accounts from unauthorized ACH debits. The service operates on two primary modes: ACH Debit Block — which defaults to blocking all ACH debits on the account with only specifically-authorized originators permitted to debit; and ACH Debit Filter — which permits ACH debits but flags items that do not match authorized originator criteria (Originator ID, SEC code, amount cap, frequency). Both modes integrate with the Cumulus Positive Pay dashboard for unified daily exception review, and both are consistent with the Nacha Rules and UCC Article 4A commercial protections.

ACH SERVICES VS. ACH ORIGATION

ACH Origination (product code TM-ACH-ORG) is the outbound service — sending payroll, supplier payments, and collections to other banks. ACH Services (this product, TM-ACH-SVC) is the inbound protection service — blocking and filtering ACH debits attempted against your account. Most commercial clients use both: origination for outbound activity and services for protection of the operating account.

WHY ACH SERVICES

Key benefits

BLOCKS UNAUTHORIZED DEBITS

Blocks unauthorized debits

Default posture is to block all ACH debits unless the originator is pre-authorized. Unauthorized debits never post; they are returned to the originating bank as 'R05 — not authorized.'

GRANULAR FILTER CONTROLS

Granular filter controls

Per-originator authorization with SEC-code restriction, amount cap, and frequency limit. Tighten controls as your organization's risk profile evolves.

TIGHT RETURN WINDOW DISCIPLINE

Tight return window discipline

Commercial accounts have a 24-hour window under UCC Article 4A to return unauthorized ACH debits. ACH Services' same-day exception dashboard makes same-day review and return achievable.

UNIFIED EXCEPTION DASHBOARD

Unified exception dashboard

ACH Services shares the Cumulus Positive Pay exception dashboard. A single workflow handles both unauthorized checks and unauthorized ACH debits.

CYBER-INSURANCE ALIGNMENT

Cyber-insurance alignment

Commercial cyber and crime insurance policies increasingly require ACH Services as a condition of coverage on ACH-fraud claims; Cumulus provides attestation documentation.

LOW-COST PROTECTION

Low-cost protection

\$20 / account / month + \$0.05 per filtered item — a small fraction of the average unauthorized-debit loss.

AUTHORIZATION FIELDS

Filter configuration

AUTHORIZATION FIELD	CONFIGURATION OPTIONS
Mode	Block-all default (allow-list only) · Filter-only (review exceptions) · Hybrid (block-all on some accounts, filter on others)
Originator ID	10-digit ACH company ID from the ACH addenda — the primary match key for authorized-originator lists.
SEC code	Limit authorizations by SEC code (e.g., allow CCD and PPD from a specific originator, but not WEB). Prevents authorized-for-payroll originators from also initiating one-time WEB debits.
Amount cap	Per-transaction maximum. Combined with frequency to prevent outsize single debits.
Frequency	Maximum debits per day / week / month. Prevents rapid-fire debits from a single originator.
Effective date range	Authorization valid only between start and end dates. Auto-expires to reduce stale-authorization risk.
Notification	Email / SMS / push to designated contacts on any new exception, on pay/return default action, and on list changes.

SERVICE FEES

Pricing

SERVICE	AMOUNT
ACH Debit Block / Filter — monthly account fee	\$20 / account / month
ACH Debit Block / Filter — per-item fee	\$0.05 per filtered ACH debit
Authorized-originator list maintenance	No charge for Business Online / API changes
Manual authorization by Treasury Services desk	\$25 per change
Unauthorized-return submission	No charge (included)
Setup fee	No charge

PROTECTION VALUE

Fraud prevention impact — illustrative

The chart below illustrates the annualized protection value of ACH Services across client size tiers. Protection value is calculated as industry-average unauthorized-ACH-debit attempts per account per year multiplied by average unauthorized-debit size — a rough estimate of avoided loss, assuming attempts are blocked by the service.

EXCEPTION REVIEW

Daily workflow

STEP	ACTIVITY	TIMING (ET)
1 · ACH debit presented	An ACH debit arrives for payment through Cumulus ACH Operator connection.	Continuous
2 · Filter check	Cumulus evaluates the debit against the authorized-originator list and filter rules.	Real-time
3 · Exception flagged	Debits not matching an authorized originator (or exceeding an amount / frequency cap) flag as exceptions.	Real-time
4 · Exception posted	Exceptions post to the Business Online dashboard alongside Positive Pay exceptions.	7:00 a.m.
5 · Client review	Treasury operator reviews each exception, views originator detail, and decides pay or return.	Before 11:00 a.m.
6 · Default action	Items without a decision at 11:00 a.m. default to client's pre-selected action.	11:00 a.m.
7 · Return submission	Items marked 'return' submitted to the ACH network as R05, R07, R10, R11, or R29 as appropriate.	Same day

ECOSYSTEM

Integration with other treasury services

- **Positive Pay** — ACH Services shares the exception dashboard and decision workflow with Check Positive Pay. A single daily review covers all unauthorized check and ACH items.
- **ACH Origination** — the Cumulus Debit Filter authorized-originator list may auto-include counterparties you originate credits to (inviting reciprocal debit authorization).
- **Lockbox** — remittance-advice matching from Cumulus Lockbox feeds authorized-originator records for accounts-receivable-direction debit control.
- **Business Analyzed Checking** — ACH Services is designed for the Analyzed Checking account structure; per-item and monthly fees are offset by earnings credit.
- **ISO 20022 reporting** — exceptions reported in camt.054 / pacs.002 format for ERP consumption.

COMMON QUESTIONS

Frequently asked questions

ACH Services vs. ACH Origination — which do I need?

Most commercial clients need both. ACH Origination handles outbound payments — payroll, vendor pay, collections. ACH Services protects the operating account against inbound unauthorized debits. They are complementary, not alternatives.

What's the difference between Block and Filter modes?

Block mode defaults to blocking all ACH debits and only permits specifically-authorized originators. Filter mode permits ACH debits but flags those that don't match your authorized-originator criteria as exceptions for review. Block is the stronger control; Filter offers operational flexibility.

What return codes are used for unauthorized debits?

Common return codes: R05 'Unauthorized debit to consumer account using corporate SEC code'; R07 'Authorization revoked'; R10 'Originator not known to receiver'; R11 'Authorized, but terms not met'; R29 'Corporate customer advises not authorized.' Selection depends on exception circumstances and is guided by Cumulus Risk Operations.

How quickly must I return an unauthorized debit?

Under UCC Article 4A (commercial accounts), unauthorized entries must be returned within 24 hours of posting. Consumer accounts under Regulation E have 60 days. Same-day exception review via ACH Services meets the commercial window comfortably.

Can I authorize a debit one-time without adding to my list?

Yes. The exception review workflow supports a 'one-time approve' action that lets a specific debit pass without adding the originator to the permanent authorized list. Useful for known-good but non-recurring transactions.

What if I accidentally authorize a fraudulent originator?

You may remove an originator from the authorized list at any time via Business Online. Future debits from that originator will be blocked or flagged. Debits that already posted are recoverable only through the Nacha return process within the applicable window; work with Cumulus Risk Operations to maximize recovery.

DISCLOSURES & REGULATORY NOTICES

Important disclosures

- § ACH Services (including ACH Debit Block, ACH Debit Filter, and unauthorized-return handling) are provided by Cumulus Bank, N.A. under the Treasury Services Master Agreement and applicable service schedule, subject to the Nacha Operating Rules and UCC Article 4A as applicable.
- § Regulation E provides consumer rights to return unauthorized ACH debits within 60 days of statement. Commercial accounts are governed by UCC Article 4A, which imposes tighter timeframes — typically 24 hours — to return unauthorized entries.
- § Cumulus cannot guarantee that every unauthorized ACH debit will be blocked. Debits from previously authorized originators (whose authorization may have been fraudulently obtained) will pay unless explicitly revoked by the client. Review Cumulus Debit Filter settings regularly.
- § The 'refer to maker' return reason code and related Nacha return codes (R05, R07, R10, R11, R29) carry specific timing and notice requirements. Follow Cumulus Risk Operations guidance for return selection.

ENGAGE A SPECIALIST

Connect with a Cumulus commercial banker

A Commercial Relationship Manager will assess your business's banking, credit, and treasury needs, coordinate supporting specialists, and return a term sheet or proposal on an expedited timeline. Existing Cumulus clients should contact their dedicated Relationship Manager directly.
