Merchant Integration

Unified treasury + merchant-services integration: consolidated reporting, automated reconciliation, and auto-post of card settlements to your Cumulus operating account — eliminating AR matching effort for card deposits.

PURPOSE	Unify Cumulus Merchant Services with Treasury reporting
CORE FEATURES	Consolidated reports · auto-reconciliation · auto-post
REPORTING CADENCE	Real-time transaction view · daily summary
DATA EXPORT	BAI2 · camt.053 · ISO 20022 pain.002 · CSV · API
RECONCILIATION	Card-transaction-to-DDA-credit matching
PRICING	\$75 / month per MID-to-DDA integration
ERP INTEGRATION	Oracle · SAP · NetSuite · Sage Intacct
REQUIRED SERVICES	Cumulus Merchant Services + Cumulus Business Checking

AT A GLANCE

Overview

Cumulus Merchant Integration joins two common but historically-separate commercial banking workflows: card-acceptance through Cumulus Merchant Services and operating-deposit management through Cumulus Business Checking. Without integration, card settlement creates a daily reconciliation burden: batches from the processor post as aggregate credits to DDA — the AR team then back-solves transaction-level composition from the Merchant Processing Statement. Merchant Integration automates the match: each DDA settlement credit is tagged with its source batch and originating transactions, delivered in a unified daily report, and optionally pre-applied against open receivables. The result is the same-day, transaction-level cash visibility that card-accepting businesses expect.

WHY INTEGRATE

Key benefits

CONSOLIDATED REPORTING Consolidated reporting Single daily report reconciling card batches (debit / credit / fee / chargeback) to DDA credits — no manual tie-out required.	AUTO-POST TO ERP Auto-post to ERP Card settlements posted to the General Ledger with revenue detail, fees, chargeback offsets, and reserve movement — daily or real-time depending on ERP connector.
TRANSACTION-LEVEL DRILL-DOWN Transaction-level drill-down From DDA credit through batch to individual card transactions, including interchange composition and assessment detail.	FEE TRANSPARENCY Fee transparency All Cumulus Merchant Services fees reconciled to monthly statement; variance-to-quoted-pricing reporting to catch downgrades and misclassifications.
CHARGEBACK VISIBILITY Chargeback visibility Chargebacks, retrievals, and representment outcomes visible alongside settlement detail; aging reports and win-rate analytics.	SAME-DAY FUNDING ALIGNMENT Same-day funding alignment For Cumulus Business Checking clients on same-day funding, card settlements appear in DDA the same day with full transaction metadata.

WHAT YOU GET

Integration capabilities

CAPABILITY	DETAILS
Batch-to-DDA reconciliation	Each card batch (MID-level) matched to the corresponding DDA credit; reconciliation deltas (batch size ≠ deposit size due to fees / chargebacks) clearly displayed.
Transaction-level lineage	From any DDA credit, drill through to the contributing batch, and then to individual card transactions — including card brand, MCC, amount, and timestamp.
Chargeback cash-flow tracking	Chargeback debits and representment-win credits posted to DDA with reference to the original transaction for complete audit trail.
Fee reconciliation	Monthly fees (interchange pass-through, assessments, network access, Cumulus margin) reconciled against the Merchant Processing Statement. Variance-to-grid flags potential misclassification.
Multi-MID support	Consolidated view across multiple MIDs (multi-location, multi-channel, multi-currency). Roll-up and drill-down navigation.
Reserve and holdback tracking	Reserve movements (triggered by chargebacks or risk review) visible with reason, amount, and release timing.
Currency handling	Multi-currency settlement (DCC / international MIDs) converted and reconciled to reporting currency.
Custom reporting	Drag-and-drop custom report builder with scheduled delivery and email subscription.

SERVICE FEES

Pricing

COMPONENT	AMOUNT	NOTES
Merchant Integration — monthly platform	\$75 / month per MID-to-DDA pairing	Discount on 3+ pairings; enterprise tier negotiated
Additional DDA destinations	\$25 / month each	Multi-DDA splitting of single MID
Additional MID sources	\$25 / month each	Multi-MID consolidation to single DDA
Custom ERP connector	One-time setup \$2,500 – \$10,000	SAP, Oracle, NetSuite, Sage Intacct pre-built at \$2,500; custom ERP at time-and-materials
Real-time API feed	\$25 / month	Webhook on DDA credit + batch metadata
Historical data export (5-year archive)	Included	Via Business Online / API

VALUE ANALYSIS

Operational cost — with vs. without

The chart below illustrates the typical monthly operational cost of card-settlement reconciliation across merchant sizes, comparing manual reconciliation (FTE effort) to Merchant Integration. Cost savings scale with transaction volume and multi-location complexity.

Typical monthly reconciliation-labor savings from Merchant Integration

HOW IT WORKS

Daily workflow

STEP	ACTIVITY	TIMING
1 · Card transaction	Transaction authorized and captured at POS, e-commerce gateway, or mobile.	Real-time
2 · Batch close	Daily batch closes at 8:00 p.m. ET (or per merchant configuration); batch total, interchange, and fee composition calculated.	End of business day
3 · DDA funding	Net batch (gross — fees — chargebacks) funded to DDA. Same-day for Cumulus Business Checking; next-day otherwise.	Same or next business day
4 · Data capture	Merchant Integration receives batch metadata via internal feed; DDA credit enriched with batch reference, card-level detail, and fee composition.	Real-time
5 · Reconciliation	Batch-to-DDA-credit match confirmed; variance (rare) flagged for investigation.	Real-time
6 · Delivery	Daily reconciliation report delivered to Business Online + ERP connector + designated email recipients.	Morning after settlement

DOWNSTREAM POSTING

ERP and accounting integrations

- **Oracle ERP Cloud / Fusion** — direct posting to GL with configurable journal-entry templates per card brand, MCC, and location.
- **SAP S/4HANA / ECC** — automatic lockbox and bank-transaction-type posting via BAI2 and camt.053.
- **Oracle NetSuite** — SuiteApp integration with auto-reconciliation to Customer Payments and Deposits.
- **Sage Intacct** — bank-rules integration with card-settlement auto-post.
- **Microsoft Dynamics 365 F&O; / Business Central** — general-ledger automatic posting.

- **QuickBooks Enterprise / Online** — Intuit Developer Network integration with transaction-level sync.
- **Custom / other ERPs** — REST API (JSON) with full transaction payload; BAI2, camt.053, or CSV delivered via SFTP.

COMMON QUESTIONS

Frequently asked questions

Do I need Merchant Integration if I only have one location?

Single-location merchants benefit less from the multi-MID consolidation view but still save significant time on card-to-DDA reconciliation and fee-variance tracking. The standard \$75 / month is typically recouped by avoided labor in the first month for any merchant processing \$50,000+ in cards per month.

Can I use Merchant Integration without Cumulus Business Checking?

No. Merchant Integration requires the DDA to be a Cumulus Business Checking account (either Fundamentals or Analyzed). This is necessary for Cumulus to provide the internal data feed connecting Merchant Services to the DDA and to guarantee same-day-funding alignment.

Does Merchant Integration change my merchant pricing?

No. Merchant Integration is a separate treasury service fee; your underlying card-processing rates remain governed by your Merchant Services Agreement. Integration reveals what you are paying — without changing the rates themselves.

How are chargebacks reflected in DDA?

Chargebacks debit the DDA on the day they post from the network, tagged with reference to the original transaction. Representment-win credits post to DDA with the same reference. Merchant Integration delivers a daily chargeback cash-flow report so AR teams can maintain accurate customer-balance records.

Can I export all this data for custom analysis?

Yes. The Merchant Integration REST API provides transaction-level, batch-level, and DDA-credit-level data for custom analytics. Export formats include JSON, CSV, BAI2, and ISO 20022 camt.053. Data is retained for 5 years.

What happens if Cumulus Merchant Services and DDA post differently?

Reconciliation variances are flagged to Cumulus Operations. Common causes: timing differences (batch settlement crossing day boundaries), reserve holdbacks, and currency conversion for multi-currency merchants. Cumulus typically resolves within one business day; unresolved cases are escalated to the Relationship Manager.

DISCLOSURES & REGULATORY NOTICES

Important disclosures

§ Merchant Integration combines data, reporting, and deposit services across Cumulus Merchant Services (payment processing) and Cumulus Treasury (deposits, reporting). Both services remain governed by their respective agreements; the Merchant Integration add-on is governed by its own service schedule under the Treasury Services Master Agreement.

- § Auto-post of card settlements to DDA relies on timely card-network funding. Delays or holds imposed by card networks, sponsor banks, or Cumulus Risk (for chargeback or reserve holdbacks) will delay auto-post. Cumulus provides status visibility through the Merchant Integration portal.
- § Consolidated reporting is provided as a convenience; the primary source of record remains the Merchant Processing Statement for card activity and the periodic deposit-account statement for DDA activity. In case of reconciliation discrepancy, primary documents control.
- § SOC 1 Type II / SOC 2 Type II coverage applies to both underlying Cumulus services; Merchant Integration inherits those audit programs. Annual reports are available to authenticated clients.

ENGAGE A SPECIALIST

Connect with a Cumulus commercial banker

A Commercial Relationship Manager will assess your business's banking, credit, and treasury needs, coordinate supporting specialists, and return a term sheet or proposal on an expedited timeline. Existing Cumulus clients should contact their dedicated Relationship Manager directly.
