Wire Transfers

Same-day settlement of domestic and international funds transfers over Fedwire, CHIPS, and SWIFT — with dual-approval, IP-whitelisting, and callback verification to counter wire-fraud attempts.

NETWORK COVERAGE	Fedwire · CHIPS · SWIFT MT103 / MT202 · ISO 20022
DOMESTIC OUT	\$20 per wire
INTERNATIONAL OUT	\$45 per wire · FX margin 0.35%
DOMESTIC IN	No charge
INTERNATIONAL IN	\$15 per wire
FEDWIRE CUT-OFF	5:45 p.m. ET for same-day settlement
SECURITY	Dual approval · IP-whitelist · callback on threshold
CHANNEL	Business Online · API · SWIFT direct

AT A GLANCE

Overview

Cumulus Wire Transfers move funds between institutions with same-day finality over the Federal Reserve's Fedwire Funds Service (for domestic wires), the Clearing House Interbank Payments System (CHIPS) for large-value domestic and international wires, and the SWIFT network for cross-border payments to 11,000+ financial institutions worldwide. Cumulus supports legacy SWIFT MT103 (single customer credit transfer) and MT202 (financial institution transfer) messaging as well as ISO 20022 pacs.008 — the global standard that replaces MT103 in the scheduled MT-to-ISO migration. Wires are initiated through Cumulus Business Online, the Cumulus Wire API, or a direct SWIFT connection for large corporate clients.

WHY CUMULUS

Key benefits

SAME-DAY SETTLEMENT Same-day settlement Fedwire and CHIPS deliver same-day finality when submitted before cut-off (5:45 p.m. ET domestic; 5:00 p.m. international). No float; funds are available to the beneficiary immediately.	BROAD NETWORK REACH Broad network reach Direct participants in Fedwire and CHIPS; SWIFT BIC CMBKUS33 with correspondent relationships across 130+ countries. ISO 20022 migration ready.
FX MARGIN TRANSPARENCY FX margin transparency 0.35% standard FX margin on international wires (vs. 1.0%+ at many regional banks); custom margin for high-volume FX clients through Cumulus Global Markets.	FRAUD CONTROLS BY DEFAULT Fraud controls by default Dual-approval workflow, IP-whitelisting on wire initiation, and callback verification on threshold-driven wires (default \$100,000; customizable).
STRAIGHT-THROUGH PROCESSING Straight-through processing Wires initiated via Cumulus Wire API or SWIFT MT can be straight-through processed without manual intervention where validation, OFAC, and limit checks pass.	RECALL AND INVESTIGATION Recall and investigation Dedicated Wire Investigation team manages recalls, tracers, and beneficiary misdirection issues; proactive outreach to correspondents for time-critical matters.

SCHEDULE OF FEES

Wire pricing

WIRE TYPE	FEE	NOTES
Domestic outgoing	\$20	USD, same-day settlement via Fedwire / CHIPS
Domestic incoming	No charge	Fedwire / CHIPS credits
International outgoing (USD)	\$35	SWIFT USD correspondent-network delivery
International outgoing (FX)	\$45 + 0.35% FX margin	Cumulus converts USD to 130+ currencies through Global Markets
International incoming	\$15	USD or FX credits
Book / internal transfer	No charge	Between Cumulus accounts (same-day, real-time)
Drawdown request	\$20	Request a wire from another institution by MT204 / letter
Wire recall / tracer	\$25 per investigation	
Amendment after initiation	\$15	
Same-day rush (after cut-off, Cumulus best effort)	\$75 premium	Subject to Fedwire close and correspondent cooperation
Repetitive-wire maintenance	No charge	Pre-registered beneficiary templates

TIMING DISCIPLINE

Operating hours and cut-offs

CHANNEL	OPERATING WINDOW (ET)	CUT-OFF FOR SAME-DAY / NEXT-DAY
Fedwire Funds	Monday–Friday 9:00 p.m. prior business day – 7:00 p.m.	5:45 p.m. Cumulus cut-off for same-day settlement
CHIPS	Monday–Friday 9:00 p.m. prior business day – 6:00 p.m.	5:00 p.m. Cumulus cut-off for same-day settlement
SWIFT (MT103 / MT202 / pacs.008)	24 / 7 messaging (settlement per correspondent windows)	5:00 p.m. Cumulus cut-off for same-day correspondent action
ISO 20022 pacs.008 (native)	Available on Fedwire ISO 20022 window and CHIPS ISO 20022	Per-network cut-off
Cumulus internal / book	24 / 7	Real-time
International FX wire	FX trade cut-off 4:30 p.m. ET for same-day settlement	Settlement per currency (spot T+2 typical)

PRICING TIERS

Wire volume and channel economics

Cumulus offers volume-based pricing on domestic outgoing wires for clients originating 500+ wires per month. The chart below shows indicative pricing across monthly volume tiers; custom pricing is available for enterprise clients through Cumulus Global Markets.

RISK MANAGEMENT

Security and fraud controls

CONTROL	HOW IT WORKS
Dual approval	Separate users for creation and approval; no single-user wire initiation above a configurable threshold.
IP-whitelisting	Wire initiation restricted to pre-registered IP ranges at both the user and API levels.
Callback verification	Cumulus Wire Operations calls the authorized contact to verify wires at or above the callback threshold (default \$100,000; client-configurable). Callback is to the phone number on record, never to a number supplied in the wire instruction.
Out-of-band MFA	Hardware token, FIDO2 security key, or mobile authenticator required at login and at wire approval.
Beneficiary template management	Pre-registered beneficiaries reduce per-wire data entry and eliminate BEC attack vectors on repetitive payments.
OFAC / sanctions screening	Every wire screened against OFAC SDN, Consolidated Sanctions, and Cumulus internal watchlists before release.
Behavioral anomaly detection	ML-based detection of patterns outside client norm (unusual beneficiary country, unusual amount, unusual originator).
Recall and tracer	24/7 Cumulus Wire Investigation team pursues recalls, tracers, and correspondent investigations.

**BEWARE BUSINESS-EMAIL-COMPROMISE (BEC)**

Wire fraud via BEC — where an attacker impersonates an executive or vendor and redirects wire instructions — is a top payment-fraud vector. Cumulus recommends: (1) callback verification on all first-time beneficiaries; (2) beneficiary-template locking with change callback; (3) dual approval with distinct devices; (4) 'Unexpected wire' policy requiring voice confirmation on changes to known beneficiary instructions.

SWIFT AND ISO 20022

Messaging formats

MESSAGE TYPE	PURPOSE	STATUS
SWIFT MT103	Single customer credit transfer (legacy)	Active through MT-to-ISO migration (current Nov 2025 target)
SWIFT MT202 / MT202COV	Financial institution credit transfer; MT202COV carries underlying customer data for cover payments	Active through MT-to-ISO migration
ISO 20022 pacs.008	Customer credit transfer (replaces MT103)	Native on Fedwire and CHIPS; parallel operation with MT103
ISO 20022 pacs.009	Financial institution credit transfer (replaces MT202)	Parallel with MT202
ISO 20022 camt.054	Bank-to-customer debit / credit notification	Replaces MT900 / MT910 debit / credit advice
Fedwire ISO 20022	Fedwire native ISO 20022 message format	Live since 2025; MT format retired per Fed schedule

COMMON QUESTIONS

Frequently asked questions

Can a wire be recalled?

Submission of a recall request is always possible, but the ability to recover funds depends on the receiving bank's cooperation and whether funds have been credited or withdrawn. Same-day domestic recall requests have a reasonable success rate if initiated within hours. International recalls typically involve 5–14 days and multiple correspondent banks.

What's the difference between MT103 and ISO 20022 pacs.008?

Both are customer-credit-transfer messages, but pacs.008 supports richer structured remittance data (purpose codes, ultimate debtor/creditor identification, and structured addresses) and is the global standard replacing MT103 under the SWIFT and Fedwire migration. Cumulus supports both; ISO 20022 is preferred for new integrations.

How does callback work?

When a wire meets or exceeds the callback threshold, Cumulus Wire Operations pauses release and calls the designated authorized contact at the phone number on record. The contact confirms the wire details verbally; only after verbal confirmation is the wire released. The call never uses a phone number supplied in the wire instruction itself.

What's your FX margin and how is it set?

Standard FX margin is 0.35% above the Cumulus Global Markets mid-market rate; a real-time rate is shown in Business Online before wire confirmation. Volume-based margins (as low as 0.10%) apply to enterprise clients through a Treasury FX agreement with Cumulus Global Markets.

Can we send wires via API?

Yes. The Cumulus Wire API supports wire initiation, status polling, recall submission, and beneficiary management via REST (OAuth 2.0) or SWIFT MT (for clients with a SWIFT BIC). API wires apply the same OFAC, dual-approval, and limit controls as UI-initiated wires.

What happens if my wire is rejected?

A wire can be rejected at several points: Cumulus pre-release (OFAC hit, limit exceeded, invalid beneficiary), correspondent bank (insufficient routing data, sanctions block), or receiving bank (invalid account). Cumulus returns the funds to your originating account and provides the rejection reason within one business day.

DISCLOSURES & REGULATORY NOTICES

Important disclosures

§ Wire transfer services are provided by Cumulus Bank, N.A. under the Treasury Services Master Agreement, applicable service schedule, and Uniform Commercial Code Article 4A (funds transfers). International wires are additionally governed by applicable FX terms and regulatory requirements including OFAC sanctions screening.

§ Wire transfers are final and generally irrevocable once executed. Recall requests may be submitted but recovery depends on the cooperation of the receiving institution; Cumulus cannot guarantee recovery of a wire sent in error, to an incorrect beneficiary, or as a result of business-email-compromise fraud.

§ Fedwire operates Monday through Friday (excluding Federal Reserve Bank holidays) from approximately 9:00 p.m. ET on the prior business day through 7:00 p.m. ET. CHIPS, SWIFT, and ISO 20022 messaging channels have their own operating windows.

§ Cumulus applies 'Know-Your-Customer' (KYC), beneficial-ownership, and OFAC screening to every wire. Wires to sanctioned parties, countries, or sectors may be blocked or rejected by Cumulus or by a correspondent bank in the payment chain.

ENGAGE A SPECIALIST

Connect with a Cumulus commercial banker

A Commercial Relationship Manager will assess your business's banking, credit, and treasury needs, coordinate supporting specialists, and return a term sheet or proposal on an expedited timeline. Existing Cumulus clients should contact their dedicated Relationship Manager directly.
